Master Parts Schedule — Tractor

What's Covered: The failure of a listed component; the Plan may provide coverage for additional components not listed when the damage is caused by or resulting from a covered failure of a listed component.
What's Excluded: See Terms and Conditions for complete Plan details and exclusions. The Plan excludes coverage for any failure caused by or resulting from the failure of a component not listed as covered, including any resulting damage to a listed component. It also excludes coverage for any failure as a result of rubbing, chafing, loose or corroded connections, fittings or bolts, or due to any type of physical damage or wear.

Coverage: PT = Powertrain, PT+H = Powertrain + Hydraulics, PREM = Premier

Concern:

Complaint:

Customer called stating the tractor would not crank to start.

Cause:

Starter(5802899063R) was manufactured poorly causing it to fail.

Correction:

Drove to customer's farm
Checked battery voltages
Load tested batteries
Checked voltages at the starter
Everything tested good so had to be the starter
Removed and replaced starter
Started tractor and everything worked properly
Picked up tools drove back to shop

STW 7/29/25

Coverage:

Starter was originally replaced on SO0158732

Concern:

Complaint :

Please wash and service per approved pretrade inspection.

Correction :

SO-0249902

Performed uptime inspection, made list of repairs. Looked up parts for repairs and finished quote.

Changed engine oil and filter. Changed fuel filters and bleed fuel system. Changed hyd oil tank, and axels. Cleaned access tank and metal filter. Torqued access plate to spec. Ran unit and bleed the hyd system. Changed transmission oil and filter. Cleaned hyd and transmission breathers. Changed crankcase breather, seal and torqued to spec. Replaced primary and secondary filters. Changed outside cabin filter and blew out inside filter. Drop 2 cooling system. Replaced the coolant coupler to bottom of cooler. Cleaned up corrosion on the DEF injector coolant hoses. Filled coolant system and bleed the 2 cooling system. Replaced the front track tension hose and o-rings. Replaced the bottom right wiper arm assembly and torqued to spec. Checked into the window wash, filled the reservoir and filled. Looked into fault 2112. Found the sensor wire was broke and corroded. Replaced the sensor. Looked into the remote faults. Replaced # 4 remote, and pilot head. Replaced # 1 pilot head. Cal all levers. Got hyd warm and calibrated pilot heads. Checked hyd and had no faults from repairs. Warm up hyd and adjusted the hi/low standby on primary pump. Went to do the twin flow pump. Had issues was getting wrong pressures from gauge. Looked into the issue, ran hyd pressure test to remotes and found that this tractor was put into parallel hyd. Ordered fittings and plug. Installed the fittings and plug to twin flow hyds. Warm up hyd and set the twin flow pump to spec. Cleaned terminals on batteries and sprayed protectant on terminals. Tighten all the bottom cab suspension. Greased unit. Had faults for the DEF system. Looked into the problem. Drained all the old DEF that wasn't to spec. Flushed tank and DEF lines with warm water. Installed New DEF filters in module. Still not passing UDST test. Removed the DEF injector and Bench tested it. Upon removal of the DEF injector the bolts broke. Extracted 3 broken bolts in exhaust housing. Did not pass, installed New Def Injector. Passed UDST test. Ran SCR verification test for a while. Seemed good test drove unit and threw Fault. Brought back in shop and flushed the DEF lines again. Ran SCR verification test. Everything went smooth on test drive, no faults and the SCR system was working in spec- dosing. Checked all fluids – full. Took unit outside and cleaned bay.
